Profile

Frontend Engineer with 5+ years of experience building scalable SaaS platforms using React, Angular, Next.js, and TypeScript. Skilled in designing modular micro-frontend systems, integrating complex APIs, and optimizing multi-tenant interfaces for speed, resilience, and maintainability. Strong track record of improving performance and reliability across large user bases, consistently achieving Lighthouse scores above 90. Focused on delivering intuitive, accessible product experiences that support rapid iteration and long-term platform growth. I am an assertive and articulate team player, with superior communication skill, excellent organizational and analytical skills. I can collaborate with different stakeholders to deliver excellent client focused results.

SKILL SET

- **Fintech Expertise**: Payment Gateway Integration, Transaction Flow Optimization, Core Banking UI, Secure API Consumption (Bearer/JWT).
- **Performance& Quality:** Web Vitals Optimization, Technical SEO, Cypress (E2E/Unit Testing), WCAG Accessibility.
- **Frontend Architecture:** Micro-frontends, React.js, Next.js (SSR/SSG), TypeScript, State Management (Redux, React Query, Zustand, HTML5, CSS3, Design Systems, Component Libraries).
- **Tools & DevOps**: Vite, Webpack, Figma, Storybook, Git Flow, CI/CD (Bitbucket/GitHub Actions), Tailwind, Material UI, Performance, lighthouse, Lazy Loading, Code Splitting.
- **Security & Compliance**: Handling sensitive data safely (PII, PCI-DSS), Secure API consumption (token rotation, encryption, validation).
- **Testing& Quality Engineering**: CI/CD pipelines for automated quality gates, Unit testing (Jest, Vitest) and Integration & E2E testing (Cypress, Playwright).

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer

Peerless Technology — Feb 2024 - Oct 2026

- Led the end-to-end development of the core banking application's frontend, designing secure, intuitive **user journeys** for high-value financial operations such as transfers, settlements, and account reconciliation
- Collaborated closely with product, compliance, and backend engineering to translate regulatory requirements (**PCI-DSS, PSD2**) into user-facing safeguards and frictionless UX.
- Built reusable UI frameworks and component libraries that reduced feature delivery time by **30%** and standardized design across multiple financial modules.
- Architected a micro-frontend ecosystem enabling independent deployment, versioning, and scaling of critical financial features (KYC, payouts, ledger views).
- Introduced **SonarQube** tailored for micro-frontend delivery, establishing automated code quality gates and reducing production bugs by 98**%** while enabling teams to ship updates without impacting the core banking shell application.

Senior Frontend Engineer

Sterling Bank — Feb 2024 - Jan 2025

- Introduced **CI/CD pipelines** tailored for micro-frontend delivery, enabling teams to ship updates without impacting the core banking shell application.
- Improved platform scalability by decoupling high-traffic payment flows, reducing load on the main application and increasing overall system uptime.
- Engineered high-performance **RESTful API integrations** with banking cores, optimizing data fetching, caching, and error-handling for real-time financial operations.
- Reduced API latency by **25%** through batching, memorization, and strategic prefetching, improving responsiveness during peak transaction periods.
- Built monitoring and alerting hooks into the frontend to surface API degradation early, enabling faster incident response and improved reliability.

Frontend Software Engineer
Gryn-index (Contract) Aug 2023 – Dec 2023

- Architected and delivered multi-role dashboard systems using TypeScript, React, and Apex Charts, enabling real-time visibility into liquidity positions, risk exposure, and application performance for internal and external stakeholders.
- Designed dynamic charting workflows capable of handling high-frequency financial data streams, ensuring smooth rendering, accurate aggregation, and responsive interactions across complex datasets.
- Implemented advanced visualization patterns—custom tooltips, multi-axis charts, drill-down analytics—to support decision-making for operations, compliance, and executive teams.
- Established a unified, scalable component library using **Tailwind CSS, Material-UI,** and custom design tokens, creating a consistent visual language across all Gryn-index applications.
- Defined reusable UI patterns, accessibility guidelines, and interaction standards that accelerated feature delivery and reduced UI inconsistencies across teams.
- Collaborated with designers and backend engineers to create a shared design-to-development workflow, improving alignment and reducing front-end rework by **40%.**

Lead Frontend Engineer
Ultainfinity Global Group Mar 2022 – June 2023

- Directed the full-cycle development of a global airdrop platform, managing architecture decisions, design hand-off, sprint planning, and production deployment across distributed engineering teams.
- Implemented strict code quality standards, enforced type-safe development practices, and led structured peer-review processes—resulting in a **20% reduction in error logs** and significantly improved platform reliability.
- Overhauled core frontend performance through bundle optimization, caching strategies, and UI refactoring, raising Lighthouse scores from **40% to 90%** and boosting user retention in a competitive fintech environment.
- Designed modular, reusable component systems and introduced best-practice patterns for state management and API orchestration, enabling faster feature delivery and reducing regression issues across the product suite.
- Partnered with product, backend, and DevOps teams to align technical strategy with business goals, ensuring secure handling of user data, seamless integration with blockchain services, and smooth global rollout of high-visibility product launches.

Frontend Developer
Techpet April 2020 - Jan 2022

- Engineered core frontend modules for Appera, a cross-industry project management SaaS platform, building high-quality, reusable React components and establishing scalable UI patterns that supported rapid feature expansion across multiple customer verticals.
- Implemented end-to-end testing workflows using Cypress to validate critical user journeys, strengthen regression coverage, and ensure the platform consistently met enterprise-grade reliability and performance benchmarks.
- Optimized rendering performance, refined state-management logic, and introduced component-level documentation and coding standards—resulting in smoother user interactions, reduced UI defects, and faster onboarding for new engineers.

EDUCATIONAL HISTORY

BSC Computer Science - LAGOS STATE UNIVERSITY Jan 2015 – April 2019
